Senseair SafeStart

Cloud connected alchol screening

Senseair SafeStart adds smart features to the touch free alcohol screener Senseair Workplace. From the web-based SafeStart Dashboard you manage all connected units, get reports and set up unique profiles suitable for your organisation. Networking multiple units together allow complete testing in high volume environments.

Registering all personnel with unique RFID cards or tags allows SafeStart to ensure that only identified users perform tests. Any positive alcohol tests will alert your authorised staff in real time.

SafeStart can be adapted to send information to your administrative system using specified protocols. This enables you to have automated sober check-in or other automated features relevant for your operations.

Standard specification

Alerts	E-mail, text message and live view
User Identification	MIFARE Classic
Record keeping	14 days
User access provisioning	Three administrative user roles. Access restriction via grouping
Data in transit	HTTPS
GDPR compliant	Yes
Integration protocols	Cloud integration (POST) MQTT client support
Green time	Configurable
Block time	Configurable
Alert limit	1 or 2
BrAC on screen	Configurable
Fleet control	Yes
Statistics	Yes

Key benefits

- Real time alerts
- Statistics
- Ability to restrict use to identified users only
- Web-based interface for management
- Automated sober check-in system
- Scalable
